JUPITER X - Cable identifier

Cable and phase identification on de-energized cables

⇒ FUNCTIONS

JUPITER X allows:

- ✓ Cable identification (low or medium voltage)
- ✓ Phase identification in short-circuit mode and open circuit mode
- ✓ Continuity in short circuit mode and open circuit mode

⇒ USE PRINCIPLE

JUPITER X consists of a removable transmitter and a Receiver, both can be used on the electric network, de-energized and earthed.

The transmitter must be connected in a substation, on a MV cell or a LV feeder, using the 3 current injection clamps connected to each phase, excluding the outer shield. The receiver allows cable identifying, continuity checking

and phase identifying in open circuit or short circuit modes.

- ✓ Simplified ergonomics: continuity and phases identifying in open circuit mode are realized in a single handling
- ✓ Single sensor for identifying whatever the cable type
- ✓ Enhanced performances on impregnated paper cables
- √ Storage of accessories and suitcase volume improved
- ✓ Trolley suitcase
- ✓ Embedded self-diagnosis functions

⇒ TECHNICAL CHARACTERISTICS

- Removable transmitter
- Lead battery 12 V 7.8 Ah
- Maximum autonomy: 10 h
- Can run on mains supply on 230 VAC
- 280 x 150 x 120 mm
- IP 65

- 29 V PP3 batteries
- Maximum autonomy:
 2000 measurements
- 380 x 290 x 70 mm
- IP 65
